Final tuning of Quotas to address fractions of a person

- o calculate the quota distribution to 0.1 digit
- o round: 0.5 rounds down, 0.6 rounds up
- o Flag those region/sex groupings that had a .5 round down
- o Calculate the difference between the total quota allotment and the number calculated thus far
- o where there is a difference, add 1 person to each flagged group (step 3) starting with the smallest region until no points remain.
